

Blackbook.ai is one of Australia's most successful and progressive automation companies. Our use of RPA, Intelligent Automation and AI to deliver on our client's pursuit of bottom line benefits; has resulted in a company that can claim a 100% success rate in solution delivery. We have an agile approach to tackling problems. We understand that there isn't one solution for every problem! Our unique approach to problem solving will see you working directly with our customers, capturing additional requirements and developing intuitive solutions while drawing on the vast knowledge of existing team members.

The Graduate Data Engineer role will see you working with multiple clients, projects and stakeholders. Internally, we have multiple teams that may see you working with DataOps, Cloud Analytics, Big Data Engineering, Data Analysis and Dashboarding. With a management team that fosters diversity and individuality, your personal skills and experiences will add to the vibrant Blackbook fabric that's growing day by day. Your responsibilities will likely include the following:

- Work with internal solution analysts and business SMEs to ensure requirements are thorough and complete
- Design and implement scalable data analytics solutions
- Providing subject matter expertise/leveraging existing knowledge in the business on automation solutions
- Create solutions utilising best development practices

To be considered for the position, you will have experience or have been exposed to the following:

- Have an IT development background or a bachelor's degree in Information Technology (or similar)
- Knowledge of SQL for querying and transforming data
- Experience with a relational database (e.g. SQL Server, PostgreSQL, MySQL)
- Experience with a visualisation tool (e.g. Power BI, Tableau, Qlik, QuickSight)
- Strong problem-solving skills
- Excellent professional presentation and communication skills (written and verbal, formal documentation, diagramming and modelling)
- Solutions focused and critical thinking skills

Highly Regarded (although not mandatory) Experience:

- AWS/Azure Data or AI based certifications (or considerable related training)
- Data Transformation (Data Factory, Glue, SSIS, Alteryx, Python, Databricks)
- Additional languages (Python, C#, PowerShell)
- Cloud infrastructure deployments (Azure/AWS)
- Cloud apps (Azure/AWS)
- Cross-platform development using .NET Core or Java
- Consulting or working across multiple business units
- Using agile project managements software (e.g. Jira or Trello)

Blackbook.ai can offer a fast paced and collaborative delivery environment with an emphasis on culture and teamwork, ensuring all projects are delivered with our high standards. We have a large team of dedicated consultants able to work alongside and guide you through your AI journey and offer on the job training and development with access to multiple certifications.

If you are looking to grow with our business by combining your energy and enthusiasm with Blackbook's solutions, please send us your details.
